
BrainSeg Data Usage Agreement

By downloading, accessing, or using the BrainSeg dataset, the user agrees to the following terms.

1. Permitted Use

The dataset may be used for lawful research, data analysis, method development, validation, and legitimate commercial research and development, provided that participant privacy is protected and this Agreement is followed.

Users may share publications, research findings, statistical summaries, algorithms, trained models, and other derived outputs, provided that these do not disclose the original dataset or enable participant re-identification.

2. Participant Privacy

Users must not attempt to identify or re-identify any participant, either directly or by linking the dataset with external datasets, public records, or other information sources. Users must not disclose information that could identify participants.

3. Data Redistribution

Users must not redistribute, sell, sublicense, or otherwise provide the original dataset, in whole or in part, to individuals or organizations not covered by this Agreement. Each user must obtain the dataset directly from the official repository and independently accept this Agreement, either individually or as an explicitly identified signatory in a group agreement.

This restriction does not prohibit sharing research findings or derived materials that do not disclose the original data or create a material risk of participant re-identification.

4. Data Security

Users must implement reasonable administrative and technical safeguards to prevent unauthorized access, disclosure, loss, or redistribution of the dataset. Users are responsible for ensuring that authorized personnel under their supervision comply with this Agreement.

In the event of a material security incident involving the dataset, users must promptly take reasonable steps to contain the incident, mitigate potential harm, and notify the dataset maintainers as soon as reasonably practicable.

5. Citation

Publications and scholarly works using BrainSeg must cite the dataset and, where applicable, its associated data descriptor in the reference list. Citation does not imply endorsement of the user's research findings by the dataset creators.

6. Intellectual Property

This Agreement does not transfer ownership of intellectual property or impose additional restrictions on independently developed methods, algorithms, software, models, or research outputs, provided that the original dataset is not redistributed in violation of this Agreement. Applicable laws and existing licenses remain in effect.

7. Disclaimer and Compliance

The BrainSeg dataset has undergone technical validation, as described in the associated data descriptor. The dataset is provided "as is", without warranties, to the extent permitted by applicable law. Users are responsible for assessing its suitability for their intended applications and complying with applicable laws, regulations, and ethical requirements.

8. Acceptance

By downloading, accessing, or using the BrainSeg dataset, the user confirms that they have read, understood, and agreed to this Agreement.
